GETTING IN THE DOOR

Think companies like Microsoft, Amazon, Facebook, and Google are getting **tons** of great applicants? Think again. "**Hiring** managers at Amazon are **spending** so much time recruiting these days that they **barely** have time to actually, well, manage," one technical program manager at Amazon told me.

Employees from other top companies **echoed** similar concerns:

- "There aren't enough good engineers in the United States. Period.

We're like vultures fighting over what little there is to eat." (Apple employee)

- "We're always hiring great talent. Always." (Google employee)
- "It's not that we don't **get** enough good candidates. It's that we just don't know who they are."
(Facebook employee)

It's true. While you're **banging down** their door to get in, recruiters are running around trying to find you. You might be able to just **stand still**, dutifully submitting your resume online. With a bit of luck and an outstanding resume, they just might bump into you and ring you up. Most candidates, **however**, find that they must get a bit more creative.
