| • They _____ meeting us today. | • He _____ my boss. |
| • She _____ the new CFO. | • You _____ right! |
| • I _____ at work right now. | |

THE INTERVIEW PROCESS

At most of the top tech companies (and many other companies). **algorithm** and coding problems form the largest component of the interview process. Think of these as **problem-solving** questions. The interviewer is looking to evaluate your ability to solve algorithmic problems you haven't seen before.

At the end of the interview, the interviewer will **walk away** with a **gut feel** for how you did. A numeric score might be assigned to your performance, but it's not actually a **quantitative** assessment. There's no chart that says how many points you get for different things. It just doesn't work like that.

However, your interviewer will make an **assessment** of your performance, usually based on the following:

- Analytical skills.
- Coding skills.
- Technical knowledge.
- Experience.
- Culture **fit**.

The importance of these areas will vary based on the question, interviewer, **role**, team, and company. In a standard algorithm question, it might be **almost** entirely the first three of those .

Review the pronunciation of the highlighted words.

Find the meaning of the highlighted words.

WHAT IS YOUR JOB?

Choose the correct Answer.

What is Stacy's job?

1. a Nurse
2. a Lawyer
3. a Waitress
